

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1. (original) A computerized method of providing and allowing secure sharing of account information between users of an Internet information aggregation system comprising:

a grantor user creating one or more view pages,

storing the grantor's view pages in a view pages database of the Internet information aggregation system,

assigning a unique visitation access code to each of a plurality of grantee users of the

Internet information aggregation system,

storing said visitation codes in a database of the Internet information aggregation system,

said grantor selectively obtaining said visitation access codes from one or more of said grantees, and

said grantor using said visitation access codes to selectively grant visitation access to one or more of said grantor's view pages to one or more of said grantees.

Claim 2. (original) The method of claim 1, wherein said grantor's view pages include

a public view that displays non-sensitive information,

a private view that displays sensitive information, and

an advisor view that displays selected account information pertaining to obtaining advice from an advisor, such as a financial, health, or travel advisor.

Claim 3. (original) The method of claim 1, wherein said step of using said visitation access codes to selectively grant visitation access to one or more of said grantor's view pages to one or more of said grantees comprises:

receiving input from said grantor for granting visitation access,

verifying that said grantor is authorized to grant visitation access,

if said grantor is authorized to grant visitation access, presenting a graphical user interface

for granting visitation access,

receiving input from the grantor for a visitation access code of a selected grantee,

determining whether said grantor entered a correct visitation access code,

if said grantor entered a correct visitation access code, displaying a list of said grantor's

available view pages, and

receiving input from said grantor for selectively granting access to one or more of said

grantor's view pages to said selected grantee.

Claim 4. (original) The method of claim 3, further comprising, in said step of selectively granting access to one or more of said grantor's view pages, selectively assigning one of three levels of access for each said view page for which access is granted, said level of access selected from the group consisting of Read Access, Refresh Access, and Full Access.

Claim 5. (currently amended) The method of claim 1, further comprising said grantor selectively revoking granting visitation access privileges to one or more of said grantees.

Claim 6. (original) The method of claim 5, further comprising, in said step of selectively granting access to one or more of the grantor's view pages, selectively granting a right of Read Access to said selected grantee, wherein said Internet information aggregation system permits said grantee to view account information displayed on the grantor's view page but does not permit said grantee to manipulate said account information or otherwise alter said view page.

Claim 7. (original) The method of claim 5, further comprising, in said step of selectively granting access to one or more of the grantor's view pages, selectively granting a right of Refresh Access to said selected grantee, wherein said Internet information aggregation system permits said grantee to view account information displayed on the grantor's view page and to selectively refresh said account information.

Claim 8. (original) The method of claim 5, further comprising, in said step of selectively granting access to one or more of the grantor's view pages, selectively granting a right of Full Access to said selected grantee, wherein said Internet information aggregation system permits said grantee to view and manipulate account information displayed on the grantor's view page as though said grantee were the grantor.

Claim 9. (original) The method of claim 5, further comprising, in said step of selectively granting access to one or more of the grantor's view pages, selectively assigning a right to one of three levels of access for each said view page for which access is granted, said level of access selected from the group consisting of Read Access, Refresh Access, and Full Access.

Claim 10. (original) The method of claim 1, further comprising the grantor selectively revoking visitation access privileges to one or more of said grantees.

Claim 11. (original) The method of claim 1, further comprising:
a grantee logging onto the Internet information aggregation system via a processor,
displaying one of said grantee's view pages on a display of said grantee's processor, said display including an option for selectively viewing view pages of grantors who have granted visitation access to said grantee,
said grantee selecting one of the grantors' view pages, and
displaying said selected grantor's view page on said grantee's display.

Claim 12. (original) The method of claim 11, wherein said step of displaying said selected grantor's view page on said grantee's display comprises:
retrieving said selected grantor's view from said view pages database,
retrieving the grantor's decryption and encryption keys from a grantor decryption and encryption keys database,

retrieving said grantee's decryption and encryption keys from a reviewer decryption and encryption keys database,

retrieving the grantor's visitation access permissions from a grantor permissions database, and utilizing the grantor's decryption and encryption keys, said grantee's decryption and encryption keys, and the grantor's visitation access permissions to display said selected grantor's view page on said grantee's display.

Claim 13. (original) The method of claim 11, further comprising determining whether said grantee has been granted a right to Read Access, Refresh Access, or Full Access, and limiting said grantee's use of said selected grantor's view page to said granted right of access.

Claim 14. (original) The method of claim 13, wherein said step of determining whether said grantee has been granted a right to Read Access, Refresh Access, or Full Access comprises:

determining whether said grantee has been granted a right to Read Access, and, if said grantee has been granted said right to Read Access, retrieving said selected grantor's view page, displaying said selected grantor's view page on said grantee's display, and permitting said grantee to view said view page in a read-only mode;

if said grantee has not been limited only to Read Access, determining whether said grantee has been granted a right to Refresh Access, and, if said grantee has been granted said right to Refresh Access, retrieving said selected host user's view page, displaying said selected

grantor's view on said grantee's display, and enabling said grantee to selectively refresh selected information on said selected grantor's view page; and

if said grantee has not been limited only to Read Access or Refresh Access, retrieving said selected grantor's view page, displaying said selected grantor's view on said grantee's display, enabling said grantee to selectively refresh selected information on said selected grantor's view page, and enabling said grantee to carry out functions on the grantor's view page as though said grantee were the grantor, said functions including carrying out transactions, logging in to selected web-sites, and modifying the grantor's account information.

Claim 15. (original) The method of claim 11, wherein said processor is a mobile device.

Claim 16. (original) The method of claim 12, wherein said processor is a mobile device.

Claim 17. (original) The method of claim 13, wherein said processor is a mobile device.

Claim 18. (original) The method of claim 14, wherein said processor is a mobile device.

Claim 19. (original) A computerized system for providing and allowing secure sharing of account information between users of an Internet information aggregation system, the Internet account aggregation system aggregating and displaying Internet account information on processors of the users, the users' processors each having a display and being interactively

connected to a host server processor via the Internet, wherein a grantor is a user who selectively grants the right to access account information displayed on the grantor user's view pages, and a grantee is a user who receives such right to access account information on the grantors' view pages, comprising:

a means for the grantors to create one or more view pages,

said host processor programmed to store said view pages created by the grantors in a view pages database of the Internet information aggregation system,

a means for assigning a unique visitation access code to each of the grantees,

said host processor programmed to store said visitation access codes in a visitation access
